SEO strategy development

**August 2013 -.
September
2013**

Institute of Information Technology

Course taken

Html, Css, JavaScript basics

Improved skills

HTML, CSS, JavaScript, jQuery

About me

I develop web interfaces, make adaptive and semantic layout for mobile screen resolutions. In my work I use modern frameworks Vue.js and React.js. I also use TypeScript for data typing where it is really necessary. I have participated in various projects both in a team and as a single frontend developer. I have experience in interviewing, code review, mentoring, working with large amounts of legacy.

Currently taking a course on Node.js (Docker, MongoDB) I am developing towards fullstack developer.

Flutter on a basic level (I know how to layout page layout, work with the state of components).

With colleagues participated in the development of the open source project BEM Design - product design ecosystem: https://github.com/bemdesign
